

Innovation Management Capabilities Assessment 2019

Innovation management maturity model for assisted or self-assessment
based on ISO 56002:2019

Innovation Management Capabilities Assessment 2019

- Innovation management maturity model for assisted or self-assessment based on ISO 56002:2019

This publication is a tool for assessing innovation management maturity levels and has been developed with the support of the consultancy organization Inngage Consulting AB by the Swedish Institute for Standards. The tool is intended to be used together with the international standard ISO 56002.

Introduction

About the tool

The Innovation management capability assessment (IMCA 2019) is a tool for an organization to determine its maturity level in terms of innovation management capabilities.

IMCA 2019 is related to ISO 56002:2019 Innovation management system – Guidance, including the eight Innovation management principles, and is inspired by the approach of the Capability maturity model integration (CMMI), developed by the Carnegie Mellon University. It is also in alignment with the format of the self-assessment tool of ISO 9004:2018 Quality of an organization – Guidance to achieve sustained success. The tool can be used in conjunction with the guidance given in ISO/TR 56004:2019 Innovation management assessment – Guidance.

How to use the tool

The tool can be used to establish the current maturity level of the organization in order to identify gaps and actions, e.g. to start implementing an innovation management system. The maturity model also gives guidance on how the organization can reach the next level. Consider the following steps that can be taken:

1. Determine the purpose of the assessment. Why are you going to do it?
2. Decide if you want to invite others inside or outside your organization to assist in, or contribute to, the assessment. Who is going to contribute? What is the role of top management?
3. Determine the scope of the assessment, e.g. the entire organization or a part of it. What is going to be assessed?
4. Familiarize yourself with the different capabilities and levels of the tool to get an overview of all assessment items.
5. Assess each of the capabilities (in any order) to determine the current level and, if relevant, the desired level of maturity for the organization.
6. Compare, discuss, and align the assessment with the other contributors, if relevant.
7. Select the most important capabilities for your organization to focus on in terms of e.g. most critical challenges or highest likelihood for successful improvements.
8. Define and prioritize actions for building and improving the selected capabilities. Use the maturity levels in the tool as guidance for how to reach the next level.
9. Decide and implement the action plan in the organization with the necessary mandate from top management if relevant.
10. Repeat the assessment at regular intervals to continually improve the innovation management capabilities in the organization.

Overview of capability elements

Context and conditions	1. Understanding of external trends and drivers
	2. Understanding of internal capabilities and assets
	3. Culture supporting creativity and deployment
	4. External and internal innovation collaboration
Leadership	5. Top management commitment
	6. Focus on value realization
	7. Innovation vision and strategy
	8. Innovation policy
	9. Organizational roles, responsibilities
Planning	10. Innovation objectives and action plans
	11. Organizational structures for innovation activities
	12. Innovation portfolios
Support	13. Resources supporting innovation activities
	14. Competence
	15. Communication and awareness
	16. Innovation tools and methods
	17. Intellectual property management
Processes	18. Innovation initiatives and projects
	19. Configuration of innovation processes
	20. Processes to identify opportunities
	21. Processes to create and validate concepts
	22. Processes to develop and deploy solutions
Evaluation and improvement	23. Innovation performance indicators
	24. Performance evaluation and improvement

Overview of maturity levels

Level	Description
1: Nothing, informal, or ad hoc	The capability is not established or established in an informal or ad hoc manner. It is not defined or managed.
2: Managed at basic level	The capability is established at a basic level. It is to some extent, but not fully, managed.
3: Defined and managed	The capability is defined and established. It is managed in a pro-active manner.
4: Systematically managed	The capability is defined, established, and aligned. It is systematically and dynamically managed.
5: Optimized	The capability is continuously improved and optimized. It is managed based on active monitoring, feedback, and learning.

NOTES

Level 1 and 2 are below the baseline and is applicable when the capability is not, or not fully, established.

Level 3 is the baseline and is reached when the capability is defined and established in the organization.

To reach level 4, it is assumed that the requirements for level 3 are satisfied.

To reach level 5, it is assumed that the requirements for level 3 and 4 are satisfied.

Description of innovation management capabilities - maturity level 3

1. **Understanding of external trends and drivers.** External trends and drivers that are relevant for the purpose of the organization are determined and analyzed. Areas of opportunity for potential value realization are determined.
2. **Understanding of internal capabilities and assets.** Internal capabilities and assets that are relevant for the purpose of the organization are determined and analyzed. Areas of opportunity for potential value realization are determined.
3. **Culture supporting creativity and deployment.** A culture that supports innovation activities, both in terms of creativity and deployment, is promoted in the organization and characterized by e.g. openness, risk taking, collaboration, diversity, and learning.
4. **External and internal innovation collaboration.** An approach for the management of internal and external collaboration, e.g. for facilitating the sharing and access to knowledge, competence, and resources, is established, and is based on an understanding of the existing capabilities of the organization.
5. **Top management commitment.** Top management is demonstrating leadership and commitment with respect to managing innovation activities, e.g. related to innovation strategy, objectives, culture, support, structures, processes, and communication. Leaders have established an inspiring vision and purpose and are engaging people to achieve those aims.
6. **Focus on value realization.** Top management is demonstrating leadership and commitment with respect to a focus on value, financial or non-financial, as the purpose and desired outcome of innovation activities. Value is considered for the organization itself, its users, or customers, as well as other interested parties.
7. **Innovation vision and strategy.** Top management has established, implemented, and is maintaining an innovation vision and an innovation strategy, or several innovation strategies if appropriate. The innovation vision provides the framework for setting the innovation strategy, policy, and objectives. A strategy can include descriptions of why innovation activities are important, the context of the organization, the innovation vision and policy, roles and responsibilities, innovation objectives and plans, as well as the structures, processes and support needed to achieve those objectives.
8. **Innovation policy.** Top management has established, implemented, and is maintaining an innovation policy that is appropriate to the purpose of the organization. The innovation policy can describe the commitment to innovation activities and provides the framework for setting innovation strategy and objectives.
9. **Organizational roles, responsibilities.** Top management has ensured that the organizational responsibilities for relevant roles are assigned, communicated, and understood in the organization. Responsibilities related to innovation activities can be assigned to existing roles, e.g. project manager, business development, or dedicated roles with a focus on innovation management.
10. **Innovation objectives and action plans.** Innovation objectives are established at relevant functions and levels in the organization. The objectives are consistent with the innovation policy and are measurable or verifiable. Actions to address risks related to innovation activities are determined.
11. **Organizational structures for innovation activities.** Top management has ensured that relevant organizational structures are established and that they have the necessary resources and are appropriate to the expected types of innovations to be achieved, e.g. radical or disruptive innovations.
12. **Innovation portfolios.** One or more innovation portfolios of innovation initiatives and projects are established, managed, and evaluated. Each portfolio is aligned with the innovation strategy and objectives, and its performance is communicated to top management.

13. **Resources supporting innovation activities.** Resources supporting innovation activities are determined and provided in a timely manner, e.g. people are empowered and have the necessary time to innovate, knowledge is effectively managed, and the necessary funding and infrastructures, physical and virtual, are available.
14. **Competence.** The necessary competences are developed and managed, e.g. by providing training, for persons involved in innovation activities, and the need for outsourced competence, e.g. academia, consultants, or other partners, is considered.
15. **Communication and awareness.** Internal and external communications relevant for innovation activities are determined, and all relevant persons are aware of the importance of innovation activities for the organization and the innovation vision, strategy, policy, and objectives.
16. **Innovation tools and methods.** Tools and methods for supporting innovation activities are determined, provided, and maintained, including e.g. descriptive, analytical, provocative, and communicative tools and methods.
17. **Intellectual property management.** An approach for the management of intellectual property, e.g. patents, copyrights, and trademarks, is established in alignment with the innovation strategy, including the rationale for what intellectual property assets to be, and not to be, protected.
18. **Innovation initiatives and projects.** Innovation initiatives and projects, including the necessary processes, structures, and resources, are planned, implemented, and controlled to address innovation opportunities. The scope, purpose, decision-making structure, the degree of internal and external collaboration, and roles and responsibilities for each initiative are established.
19. **Configuration of innovation processes.** Innovation processes are configured and established to suit each innovation initiative and project depending on, e.g. the type of innovation to be achieved, internal or external collaboration, or other organizational factors. Initiatives can e.g. be implemented internally, in partnerships or through outsourcing or acquisitions.
20. **Processes to identify opportunities.** Processes to identify and define innovation opportunities are established, including e.g. the acquisition of insights and knowledge from internal and external sources about stated and unstated needs and expectations as well as the articulation of the value that can potentially be realized.
21. **Processes to create and validate concepts.** Processes to create and validate innovation concepts are established, including e.g. the generation, selection and development of ideas and potential solutions from internal and external sources, as well as different validation approaches, e.g. tests and experiments to reduce uncertainties and gain new knowledge.
22. **Processes to develop and deploy solutions.** Processes to develop and deploy solutions are established, including e.g. the consideration of the value realization or business model, intellectual property issues, legal requirements as well as the necessary deployment capabilities e.g. promotion, production, supply, and ecosystems. Processes to monitor and learn from the adoption of the innovation and the impact in terms of value realization are established.
23. **Innovation performance indicators.** Innovation performance indicators are determined based on what needs to be monitored and measured, e.g. the innovation strategy and objectives. Input-, throughput-, and output-related indicators are considered.
24. **Performance evaluation and improvement.** Innovation performance is analyzed and evaluated in relation to e.g. the innovation strategy and objectives. Opportunities for improvement are determined and the necessary actions are implemented.

Innovation management capabilities: assessment

Level 1	Level 2	Level 3	Level 4	Level 5
Nothing, informal, or ad hoc	Managed at basic level	Defined and managed	Systematically managed	Optimized

	Item	Current level	Desired level	Comments
1.	Understanding of external trends and drivers			
2.	Understanding of internal capabilities and assets			
3.	Culture supporting creativity and deployment			
4.	External and internal innovation collaboration			
5.	Top management commitment			
6.	Focus on value realization			
7.	Innovation vision and strategy			
8.	Innovation policy			
9.	Organizational roles, responsibilities			
10.	Innovation objectives and action plans			
11.	Organizational structures for innovation activities			
12.	Innovation portfolios			
13.	Resources supporting innovation activities			
14.	Competence			
15.	Communication and awareness			
16.	Innovation tools and methods			
17.	Intellectual property management			
18.	Innovation initiatives and projects			
19.	Configuration of innovation processes			
20.	Processes to identify opportunities			
21.	Processes to create and validate concepts			
22.	Processes to develop and deploy solutions			
23.	Innovation performance indicators			
24.	Performance evaluation and improvement			

Innovation management capabilities: maturity model

1. Understanding of external trends and drivers

Level	Description	Rating	Comments
1	External trends and drivers are not determined or determined in an informal or ad hoc manner.		
2	Basic processes for determining external trends and drivers are established.		
3	External trends and drivers that are relevant for the purpose of the organization are determined and analyzed. Areas of opportunity for potential value realization are determined.		
4	External trends and drivers, and areas of opportunity are systematically determined related to different aspects, e.g. economic, social, technological, legal, and political aspects, including past experience, present situation, and potential future scenarios.		
5	Processes for the ongoing monitoring, reviewing and analysis of external trends and drivers are established, implemented, maintained, and continuously improved. Areas of opportunity are prioritized and acted upon.		

2. Understanding of internal capabilities and assets

Level	Description	Rating	Comments
1	Internal capabilities and assets are not determined or determined in an informal or ad hoc manner.		
2	Basic processes for determining internal capabilities and assets are established.		
3	Internal capabilities and assets that are relevant for the purpose of the organization are determined and analyzed. Areas of opportunity for potential value realization are determined.		
4	Internal capabilities and assets, and areas of opportunity are systematically determined related to e.g. the strategic direction and core competences of the organization, including the performance and potential of current offerings and value realization models.		
5	Processes for the ongoing monitoring, reviewing and analysis of internal capabilities and assets are established, implemented, maintained, and continuously improved. Areas of opportunity are prioritized and acted upon.		

3. Culture supporting creativity and deployment

Level	Description	Rating	Comments
1	A culture supporting innovation activities is not promoted or promoted in an informal or ad hoc manner.		
2	A culture supporting creativity is promoted but the cultural aspects of deployment and execution of innovation activities are lacking.		
3	A culture that supports innovation activities, both in terms of creativity and deployment, is promoted in the organization and characterized by e.g. openness, risk taking, collaboration, diversity, and learning.		
4	A culture in terms of shared values, beliefs, and behaviors, is systematically promoted and demonstrated by leaders at all levels, enabling the coexistence of creativity and effective execution and deployment.		
5	The culture of the organization is continuously analyzed, evaluated, and improved with a focus on the long-term buildup of innovation capabilities.		

4. External and internal innovation collaboration

Level	Description	Rating	Comments
1	Collaboration activities are not managed or managed in an informal or ad hoc manner.		
2	Basic management of internal and external collaboration is established.		
3	An approach for the management of internal and external collaboration, e.g. for facilitating the sharing and access to knowledge, competence, and resources, is established, and is based on an understanding of the existing capabilities of the organization.		
4	Internal and external collaboration is systematically managed to support the innovation strategy and objectives and by regularly reviewing and aligning the strategic relevance of collaboration partners.		
5	The approach for the management of collaboration, is continuously monitored, analyzed, evaluated, and improved.		

5. Top management commitment

Level	Description	Rating	Comments
1	Top management is not demonstrating leadership and commitment or demonstrating it in an informal or ad hoc manner.		
2	Leadership and commitment are demonstrated at a basic level by top management and other leaders.		
3	Top management is demonstrating leadership and commitment with respect to managing innovation activities, e.g. related to innovation strategy, objectives, culture, support, structures, processes, and communication. Leaders have established an inspiring vision and purpose and are engaging people to achieve those aims.		
4	Top management is systematically and consistently demonstrating leadership and commitment by being accountable for the effectiveness and efficiency of innovation activities and by promoting performance evaluation using established indicators.		
5	Top management is continuously evaluating and improving its leadership and commitment. Leaders at all levels are actively encouraged to improve the efficiency and effectiveness of innovation activities through systematic feedback and learning.		

6. Focus on value realization

Level	Description	Rating	Comments
1	Top management is not demonstrating a focus on value realization or demonstrating it in an informal or ad hoc manner.		
2	A focus on value realization is demonstrated at a basic level by top management.		
3	Top management is demonstrating leadership and commitment with respect to a focus on value, financial or non-financial, as the purpose and desired outcome of innovation activities. Value is considered for the organization itself, its users, or customers, as well as other interested parties.		
4	Top management is demonstrating leadership and commitment with respect to value realization, by systematically identifying innovation opportunities based on stated or unstated needs and expectations. The appetite for risk and tolerance for failure are considered in the innovation processes.		
5	Top management is demonstrating leadership and commitment with respect to value realization, by continuously evaluating and improving the balance between opportunities and risks, including the potential value of lost or missed innovation opportunities.		

7. Innovation vision and strategy

Level	Description	Rating	Comments
1	The innovation strategy is not determined or determined in an informal or ad hoc manner. There is no innovation vision established.		
2	Top management has established a basic innovation vision and strategy, but they are implemented and maintained in an informal or ad hoc manner.		
3	Top management has established, implemented, and is maintaining an innovation vision and an innovation strategy, or several innovation strategies if appropriate. The innovation vision provides the framework for setting the innovation strategy, policy, and objectives. A strategy can include descriptions of why innovation activities are important, the context of the organization, the innovation vision and policy, roles and responsibilities, innovation objectives and plans, as well as the structures, processes and support needed to achieve those objectives.		
4	The innovation strategy is systematically maintained and communicated inside and outside of the organization and it is understood and acted upon by relevant interested parties. The innovation vision is pro-actively used to enhance the reputation of the organization and to attract e.g. people and partners.		
5	Top management is continuously reviewing and improving the innovation strategy and ensuring that it is adaptable and allowed to change based on feedback and performance evaluation of innovation activities.		

8. Innovation policy

Level	Description	Rating	Comments
1	There is an informal or no innovation policy established.		
2	Top management has established a basic innovation policy, but it is implemented and maintained in an informal or ad hoc manner.		
3	Top management has established, implemented, and is maintaining an innovation policy that is appropriate to the purpose of the organization. The innovation policy can describe the commitment to innovation activities and provides the framework for setting innovation strategy and objectives.		
4	The innovation policy is systematically maintained and communicated in the organization and is understood and applied by the relevant interested parties.		
5	Top management is continuously reviewing and improving the innovation policy when appropriate.		

9. Organizational roles, responsibilities

Level	Description	Rating	Comments
1	Responsibilities for innovation activities are not handled or handled in an informal or ad hoc manner with no specific roles assigned.		
2	Top management has ensured that some or basic responsibilities have been assigned, but they are implemented and maintained in an informal or ad hoc manner.		
3	Top management has ensured that the organizational responsibilities for relevant roles are assigned, communicated, and understood in the organization. Responsibilities related to innovation activities can be assigned to existing roles, e.g. project manager, business development, or dedicated roles with a focus on innovation management.		
4	Top management has specifically assigned responsibilities for ensuring that systematic innovation practices are implemented, and that innovation performance is reported to top management.		
5	Top management is continuously reviewing and improving the assigned responsibilities and authorities for relevant roles.		

10. Innovation objectives and action plans

Level	Description	Rating	Comments
1	Innovation objectives are not determined or determined in an informal or ad hoc manner. Risks related to innovation activities are not addressed.		
2	Innovation objectives and basic action plans are established. Risks related to innovation activities are handled in an informal or ad hoc manner.		
3	Innovation objectives are established at relevant functions and levels in the organization. The objectives are consistent with the innovation policy and are measurable or verifiable. Actions to address risks related to innovation activities are determined.		
4	Innovation objectives are continuously monitored and updated as appropriate. They are communicated and understood in the organization. Planning of innovation activities is systematically considering the uncertainties related to the innovation opportunities, and the degree of risk that can be accepted.		
5	Innovation objectives and planning activities are continuously reviewed and improved based on monitoring and feedback. Actions are taken to prevent or reduce undesired effects.		

11. Organizational structures for innovation activities

Level	Description	Rating	Comments
1	Organizational structures for innovation activities are not established or are informal or ad hoc.		
2	Top management has established organizational structures, but they are implemented and maintained in an informal or ad hoc manner.		
3	Top management has ensured that relevant organizational structures are established and that they have the necessary resources and are appropriate to the expected types of innovations to be achieved, e.g. radical or disruptive innovations.		
4	Top management has specifically considered how structures for creativity and exploration can co-exist, or be integrated, with structures for deployment and efficiency, as well as the need for different leadership styles and cultures.		
5	Top management is continuously evaluating and adapting the established organizational structures for innovation activities.		

12. Innovation portfolios

Level	Description	Rating	Comments
1	Innovation initiatives and projects are not forming innovation portfolios, or it is done in an informal or ad hoc manner.		
2	Innovation portfolios are established, but they are managed in an informal or ad hoc manner.		
3	One or more innovation portfolios of innovation initiatives and projects are established, managed, and evaluated. Each portfolio is aligned with the innovation strategy and objectives, and its performance is communicated to top management.		
4	Each innovation portfolio is systematically managed by regularly prioritizing initiatives and projects, ensuring the consistency of the portfolio, balancing different time horizons, as well as considering different levels of risks and types of innovations. Uncertainties and risks are evaluated and managed within and across portfolios.		
5	Innovation portfolios, their performance and contribution to the overall strategy of the organization are continuously monitored, analyzed, evaluated, and improved.		

13. Resources supporting innovation activities

Level	Description	Rating	Comments
1	Resources for innovation activities are not determined and provided or it is done in an informal or ad hoc manner.		
2	Basic resources are provided, but they are managed in an informal or ad hoc manner.		
3	Resources supporting innovation activities are determined and provided in a timely manner, e.g. people are empowered and have the necessary time to innovate, knowledge is effectively managed, and the necessary funding and infrastructures, physical and virtual, are available.		
4	Resources are systematically managed e.g. people are consistently recognized for their achievements, diversity is considered when forming teams, tools are supporting the re-use of knowledge, funding and investment principles are established and continuously improved, and dedicated innovation funding is established when necessary.		
5	The provision of resources for innovation activities is continuously monitored, analyzed, evaluated, and improved with a focus on the long-term buildup of innovation capabilities.		

14. Competence

Level	Description	Rating	Comments
1	Competences needed for innovation activities are not developed and managed or it is done in an informal or ad hoc manner.		
2	A basic approach for the development and management of competences is established, but it is implemented in an informal or ad hoc manner.		
3	The necessary competences are developed and managed, e.g. by providing training, for persons involved in innovation activities, and the need for outsourced competence, e.g. academia, consultants, or other partners, is considered.		
4	A systematic approach for the development and management of competences is established including actions to acquire and continuously evaluate, improve, and renew the necessary competence.		
5	The competence needs for innovation activities are continuously monitored, analyzed, evaluated, and updated with a focus on the long-term buildup of innovation capabilities.		

15. Communication and awareness

Level	Description	Rating	Comments
1	Communication and awareness related to innovation activities are not in place or are informal or ad hoc.		
2	Basic internal and external communications and awareness creating activities are established, but they are implemented in an informal or ad hoc manner.		
3	Internal and external communications relevant for innovation activities are determined, and all relevant persons are aware of the importance of innovation activities for the organization and the innovation vision, strategy, policy, and objectives.		
4	A systematic approach for communications and creating awareness is established. Relevant persons in the organization are aware of how they can contribute to the effectiveness and efficiency of innovation activities.		
5	The communication and awareness need, and actions related to innovation activities are continuously monitored, analyzed, evaluated, and improved.		

16. Innovation tools and methods

Level	Description	Rating	Comments
1	Tools and methods for supporting innovation activities are not determined and provided or it is done in an informal or ad hoc manner.		
2	Basic tools and methods are provided, but they are managed in an informal or ad hoc manner.		
3	Tools and methods for supporting innovation activities are determined, provided, and maintained, including e.g. descriptive, analytical, provocative, and communicative tools and methods.		
4	Tools and methods are systematically managed to provide a mix that is relevant for different types of innovation activities and innovations, e.g. ethnographic research, scenario planning, business modelling, and idea management tools.		
5	The provision of tools and methods for innovation activities is continuously monitored, analyzed, evaluated, and improved with a focus on the long-term buildup of innovation capabilities.		

17. Intellectual property management

Level	Description	Rating	Comments
1	Intellectual property assets are not managed or managed in an informal or ad hoc manner.		
2	Basic management of intellectual property is established, including an approach for what intellectual property assets to be, and not to be, protected.		
3	An approach for the management of intellectual property, e.g. patents, copyrights, and trademarks, is established in alignment with the innovation strategy, including the rationale for what intellectual property assets to be, and not to be, protected.		
4	Intellectual property assets are systematically managed in terms of maintaining an inventory of the assets of the organization, monitoring, and analyzing disclosed intellectual property that is relevant, and considering how to realize value from intellectual property, e.g. through licensing, cross-licensing, or sale.		
5	The approach for the management of intellectual property, including awareness, competence, and value realization, is continuously monitored, analyzed, evaluated, and improved.		

18. Innovation initiatives and projects

Level	Description	Rating	Comments
1	Innovation initiatives and projects are not implemented or implemented in an informal or ad hoc manner. Initiatives are not planned or controlled.		
2	Innovation initiatives and projects are planned and implemented to address innovation opportunities. Control is informal or ad hoc.		
3	Innovation initiatives and projects, including the necessary processes, structures, and resources, are planned, implemented, and controlled to address innovation opportunities. The scope, purpose, decision-making structure, the degree of internal and external collaboration, and roles and responsibilities for each initiative are established.		
4	Innovation initiatives and projects are systematically managed, evaluated, and improved based on a set of performance criteria and by considering the uncertainties related to the specific innovation opportunity, and the degree of risk that can be accepted.		
5	Planning and control of innovation initiatives and projects are continuously reviewed and improved based on monitoring and feedback. Actions are taken to prevent or reduce undesired effects.		

19. Configuration of innovation processes

Level	Description	Rating	Comments
1	Innovation processes are not implemented or implemented in an informal or ad hoc manner. Processes are not specifically configured to suit specific innovation initiatives and projects.		
2	Innovation processes are established but their configurations are inflexible, informal, or ad hoc.		
3	Innovation processes are configured and established to suit each innovation initiative and project depending on, e.g. the type of innovation to be achieved, internal or external collaboration, or other organizational factors. Initiatives can e.g. be implemented internally, in partnerships or through outsourcing or acquisitions.		
4	Innovation processes are systematically designed and configured to be flexible and adaptable, and having characteristics such as being non-linear and iterative. Processes are pro-actively implemented connected to, or independent from, other processes in the organization.		
5	The configurations of innovation processes are continuously reviewed and improved based on monitoring and feedback. Actions are taken to ensure flexibility and resilience.		

20. Processes to identify opportunities

Level	Description	Rating	Comments
1	Processes to identify opportunities are not implemented or implemented in an informal or ad hoc manner.		
2	Basic processes to identify opportunities are established.		
3	Processes to identify and define innovation opportunities are established, including e.g. the acquisition of insights and knowledge from internal and external sources about stated and unstated needs and expectations as well as the articulation of the value that can potentially be realized.		
4	Processes to identify opportunities are systematically implemented and supported by relevant resources, tools, and methods, e.g. research, crowdsourcing, focus groups and risk analysis.		
5	Processes to identify opportunities are continuously reviewed and improved based on monitoring and feedback. Actions are taken to ensure effectiveness and efficiency.		

21. Processes to create and validate concepts

Level	Description	Rating	Comments
1	Processes to create and validate concepts are not implemented or implemented in an informal or ad hoc manner.		
2	Basic processes to create and validate concepts are established.		
3	Processes to create and validate innovation concepts are established, including e.g. the generation, selection and development of ideas and potential solutions from internal and external sources, as well as different validation approaches, e.g. tests and experiments to reduce uncertainties and gain new knowledge.		
4	Processes to create and validate concepts are systematically implemented and supported by relevant resources, tools, and methods, e.g. ideation, crowdsourcing, focus groups and risk analysis.		
5	Processes to create and validate concepts are continuously reviewed and improved based on monitoring and feedback. Actions are taken to ensure effectiveness and efficiency.		

22. Processes to develop and deploy solutions

Level	Description	Rating	Comments
1	Processes to develop and deploy solutions are not implemented or implemented in an informal or ad hoc manner.		
2	Basic processes to develop and deploy solutions are established.		
3	Processes to develop and deploy solutions are established, including e.g. the consideration of the value realization or business model, intellectual property issues, legal requirements as well as the necessary deployment capabilities e.g. promotion, production, supply, and ecosystems. Processes to monitor and learn from the adoption of the innovation and the impact in terms of value realization are established.		
4	Processes to develop and deploy solutions are systematically implemented and supported by relevant resources, tools, and methods.		
5	Processes to develop and deploy solutions are continuously reviewed and improved based on monitoring and feedback. Actions are taken to ensure effectiveness and efficiency.		

23. Innovation performance indicators

Level	Description	Rating	Comments
1	Innovation performance is not monitored and measured, or it is done in an informal or ad hoc manner.		
2	Basic innovation performance indicators are established but activities for monitoring and measurement are informal or ad hoc.		
3	Innovation performance indicators are determined based on what needs to be monitored and measured, e.g. the innovation strategy and objectives. Input-, throughput-, and output-related indicators are considered.		
4	Innovation performance indicators and tools and methods for monitoring and measurement are systematically applied at organizational, portfolio and initiative and project levels.		
5	Innovation performance indicators are continuously reviewed and improved based on monitoring and feedback.		

24. Performance evaluation and improvement

Level	Description	Rating	Comments
1	Innovation performance is not evaluated and improved, or it is done in an informal or ad hoc manner.		
2	Basic activities for performance evaluation are implemented but improvements are informal or ad hoc.		
3	Innovation performance is analyzed and evaluated in relation to e.g. the innovation strategy and objectives. Opportunities for improvement are determined and the necessary actions are implemented.		
4	Activities to evaluate and improve innovation performance are systematically implemented at relevant organizational levels, e.g. in the context of internal audits or management reviews.		
5	The approach to innovation performance evaluation and improvement is continuously reviewed and improved based on monitoring and feedback.		

Mapping of innovation management capability elements

The table shows how the capability elements are related to the different clauses of ISO 56002:2019 and to the Innovation management principles described in detail in ISO 56000.

Capability element	Clause in ISO 56002:2019	Innovation management principle
1. Understanding of external trends and drivers	4.1.1, 4.1.2	IMP 5
2. Understanding of internal capabilities and assets	4.1.1, 4.1.3	
3. Culture supporting creativity and deployment	4.4.1, 4.4.2	IMP 4
4. External and internal innovation collaboration	4.4.1, 4.4.3	IMP 4
5. Top management commitment	5.1.1	IMP 2
6. Focus on value realization	5.1.2	IMP 1
7. Innovation vision and strategy	5.1.3, 5.1.4	IMP 3
8. Innovation policy	5.2	
9. Organizational roles, responsibilities	5.3	
10. Innovation objectives and action plans	6.1, 6.2	
11. Organizational structures for innovation activities	6.3	IMP 7
12. Innovation portfolios	6.4	IMP 6
13. Resources supporting innovation activities	7.1	IMP 3
14. Competence	7.2	
15. Communication and awareness	7.3, 7.4	IMP 2
16. Innovation tools and methods	7.6	
17. Intellectual property management	7.8	
18. Innovation initiatives and projects	8.1, 8.2	
19. Configuration of innovation processes	8.3.1	IMP 7
20. Processes to identify opportunities	8.3.2	IMP 5
21. Processes to create and validate concepts	8.3.3, 8.3.4	IMP 6
22. Processes to develop and deploy solutions	8.3.5, 8.3.6	IMP 1
23. Innovation performance indicators	9.1.1.1	IMP 8
24. Performance evaluation and improvement	9, 10	IMP 8

The table shows how the Innovation management principles are related to selected capability elements.

Innovation management principle	Capability elements
IMP 1. Realization of value	6. Focus on value realization 22. Processes to develop and deploy solutions
IMP 2. Future-focused leaders	5. Top management commitment 15. Communication and awareness
IMP 3. Strategic direction	7. Innovation vision and strategy 13. Resources supporting innovation activities
IMP 4. Culture	3. Culture supporting creativity and deployment 4. External and internal innovation collaboration
IMP 5. Exploiting insights	1. Understanding of external trends and drivers 20. Processes to identify opportunities
IMP 6. Managing uncertainty	12. Innovation portfolios 21. Processes to create and validate concepts
IMP 7. Adaptability	11. Organizational structures for innovation activities 19. Configuration of innovation processes
IMP 8. Systems approach	23. Innovation performance indicators 24. Performance evaluation and improvement
